

System Administration

MAR's ISP group specializes in full life-cycle system administration support to computer systems in classified environments throughout the intelligence community. Our highly competent staff of system administrators can tie together all of your computing needs (storage, processing, backups, networking, etc.) and deliver superior solutions. We are extremely knowledgeable of each of the major operating systems used within our clients' information technology infrastructure as well as each of the hardware platforms on which they operate. MAR provides this full range of services from the lowest level of standalone workstations to high-end servers in a complex, virtualized, and physical environment. In addition to providing these services on a daily basis, MAR is uniquely experienced at providing these services in response to QRC and surge efforts.
