

Systems Engineering Support

MAR's ISP team provides a full range of Information Technology Systems Engineering support to our customers. Communication, coordination, process improvement, and utilization of sound engineering principles are hallmarks of our Systems Engineering approach. We provide SE&I services for classified DoD and IC research, operations, and test and evaluation requirements. This support includes the development of test plans, systems design support, and research associated with advanced maritime surveillance and counterterrorism technologies.

MAR provides requirements definition, acquisition support, and logistics for the deployment and evaluation of specialized at-sea equipment and instrumentation, including subsea fiber optic and power cables, undersea remote vehicles, and other towed and moored systems. Our highly qualified ISP professionals also support the engineering development and fielding of bio-defense and bio-analysis systems.
